Project 1: ITGC & SOX Compliance Review (Company P)

Project: Integrated Audit & IT General Controls (ITGC) Review

Target: Company P (Professional Services/Audit Framework)

Preparer: Henrietta Onaga, MBA, FCCA, CISA (Exam Passed)

Task 1: SOX Risk & Control Gap Analysis

- **Process:** Financial Closing and Reporting.
- **Identified Gap:** Lack of automated reconciliation between the Subsidiary Ledger and General Ledger.
- **Risk:** Manual entry error leading to material misstatement in Q3/Q4 filings.
- **Remediation:** Implement automated system-to-system reconciliation with an exception report reviewed weekly by the Controller.

Task 2: SDLC Walkthrough (System Development Life Cycle)

- **Key Question:** "How are emergency code changes documented and approved during off-hours?"
- **Observation:** Current process allows developers to push "hotfixes" to production without secondary QA if a "Critical" ticket is open.
- **Gap:** Bypassing the Test environment creates security vulnerabilities and potential system downtime.

Task 3: Change Management Test of Design (ToD)

- **Control:** All production migrations must have a verified Jira ticket and Peer Review sign-off.
- **Testing Result:** Sample of 25 changes showed 92% compliance. 2 instances lacked Peer Review.
- **Conclusion:** Control is **Partially Effective**. Management must enforce mandatory fields in Jira before migration.
